Summary

Software engineer building performance-focused web and AI chat experiences for millions of users. Experienced in web development, React, LLM orchestration, browser performance, accessibility and enterprise compliance.

Experience

Microsoft Seattle, WA / Vancouver, BC

Software Engineer II, Microsoft 365 Copilot (relocated to Seattle Oct. 2025) *Aug. 2025 – Present*

- Leading contributor to the architecture, implementation, and migration of Copilot's chat streaming from a React-centric canvas to incremental server-side Markdown-to-HTML rendering with Web Components, achieving 45% lower CPU time, 9% lower heap usage, and 41% less Long Animation Frame (LoAF) blocking time.
- Owned the architecture and implementation of AI progress-messages (chain-of-thought), coordinating across teams to map LLM orchestration events to streamed UI components for reasoning, search, code execution, skills, and agents, with end-to-end validation.
- Designed reusable server-rendered streaming patterns for accessible AI-chat rich responses, including nested and interleaved streams, screen-reader announcements, and locale-aware Web Components.

Software Engineer, Microsoft 365 Copilot & Microsoft Whiteboard (Vancouver, BC) *Oct. 2023 – Aug. 2025*

- Reduced Copilot's P95 user-perceived page load time from 25 seconds to under 10 seconds through profiling and critical-path optimizations across rendering, networking, and bundle size reductions.
- Owned the technical design and implementation of Copilot's side-chat orchestration layer, covering in-chat grounding with enterprise data, conversation storage, LLM observability, as well as responsible AI, privacy and security reviews.
- Defined technical approaches for early Copilot integrations with Word, PowerPoint, and Excel, ensuring support for M365-file grounding in chat, LLM-generated document creation, and chat-to-application handoff flows.
- Built a modular React component system for AI-powered cards displaying first-party and third-party files, email, meetings, and other Microsoft 365 content artifacts in Office search results.
- Shipped React usability improvements to Microsoft Whiteboard's canvas interactions, selection, panning, templates, and toolbar.

Project Manager & Software Engineer Intern, Microsoft Whiteboard (Seattle, WA) *Summers 2021 & 2022*

- Built and shipped an in-app feature announcement dialog system for Microsoft Whiteboard as well as Microsoft Teams workflows for retrieving shared boards, validating permissions, and opening boards from Teams chats.

Wombo AI Toronto, ON / Sao Paulo, Brazil

Strategic Advisor & Head of Operations, Brazil *Sep. 2020 – Apr. 2021*

- Planned and executed Wombo AI launch in Brazil, helping drive early adoption in a market accounting for over 90% of initial traffic; the app reached 50 million downloads in four months and #1 App Store rankings in 20+ countries.

Education

University of Toronto Toronto, ON

Honours Bachelor of Science in Computer Science (cGPA: 3.9/4.0) *Sep. 2019 – Apr. 2023*

Computer Science Specialist and Mathematics Minor

Member of U of T's Technology Leadership Initiative program

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C, C++, SQL, R
Frontend: React, HTML/CSS, Web Components, TanStack, React Native
Backend & AI: LLM orchestration, compliant AI, response streaming, Express, FastAPI
Engineering: Accessibility, performance profiling and optimization

University Experience

University of Toronto Toronto, ON

Teaching Assistant *Jan. 2022 – Apr. 2023*

- Courses: CSC324: Principles of Programming Languages and CSC209: Software Tools and Systems Programming.
- Led tutorials, office hours, and assessment for courses spanning functional programming, language semantics, C, Unix/Linux, processes, memory management, debugging, and software tooling.

UofT AI (University of Toronto Artificial Intelligence Group) Toronto, ON

Director of Marketing *Aug. 2020 – May 2021*

- Led a team of 15 students managing marketing operations and promotion for the UofT AI Conference, attended by 800+ participants and featuring speakers including Turing Award recipient Geoffrey Hinton.

External Relations Executive *Feb. 2020 – Aug. 2020*

- Organized an international machine learning competition for 100+ students from the top 25 North American universities, with a $100,000 budget and partnerships including Google AI, IBM, DeepMind, and Vector Institute.
- Created monthly artificial-intelligence newsletters for 1,300+ recipients.

Google Developer Student Club Toronto, ON

Research Director *Aug. 2020 – Jul. 2021*

- Researched technology news, tools, and learning resources and presented workshops for students from diverse computer-science backgrounds.

Projects & Publication

Key-Value Store Database From Scratch | *C++* *Apr. 2023*

Social Media Influence Analysis Research | *Python* *Apr. 2023*

SeeMath: Mathematical Visualizations for Hypatia | *Java* *Dec. 2020*

Scopinho, Tales (2020). Neural Networks on Recruiting Athletes (Viewpoint), *STEM Fellowship Journal.* *Aug. 2020*

Awards and Honors

2020, 2021, 2022, 2023: Dean's Honors Scholar
2019: First Place, STEM Fellowship Literature Review Competition.
